ReFresh Reverse Osmosis System

DHK40143-HCROPW-1

DHK ReFresh Reverse Osmosis Water Filtration System employs state of the art technology such as micro membranes, long lasting sediment and carbon filters, long life cycle solenoid valves, FDA grade materials, etc. Our system is integrated with a cooler and heater, allowing you to choose your desired water temperature. The system is built using reliable, dependable components which provide many years of use.

Features:

- House voltage 110/120 VAC/60 Hz
- Attractive design
- Adjustable levelling and rear handle
- Cooling/heating system- 3 liter/3 liter compressor/ R-134a
- 8-liter water storage tank
- Produces delicious chilled and hot water
- Ideal for office, home, shops, factories, etc.

Dimensions: 45"x15"x15"

Reverse Osmosis System

5 stages:

- 1st- Sediment Filtration
- 2nd- Pre-carbon Filtration
- 3rd- Ultra Membrane Filtration
R/O membrane
- 4th- Post-carbon filtration
- 5th- UV sterilization (optional)

DHK Medical Products takes pride in producing water systems with the use of high technology as well as high speed manufacturing processes to provide the systems at the lowest possible cost. We at DHK are very environmentally conscious and apply these ethics to our manufacturing processes. DHK products are patented and trademarked by the company and we are constantly researching new technologies for cost effective and useful consumer and defense products.
