

DHK Intelli-Scan BP Monitor

What is high blood pressure?

Everyone has blood pressure. It is the force of blood against the walls of the arteries. This force is created by the heart as it pumps blood to all parts of the body. In some people, blood pressure is nearly always higher than it should be. Doctors still don't know what causes most high blood pressure, but they can help you control it.

What does high blood pressure do to your body?

High blood pressure adds to the workload of the heart and the arteries. The heart must pump with more force, and the arteries must carry blood that is moving under greater pressure. If high blood pressure continues for a long time, the heart and the arteries may not function as well as they should and other body organs may also be affected. There is increased risk of stroke, heart failure, kidney failure and heart attack.

PRODUCT NAME Makes Home Monitoring Easy, Accurate and Comfortable

Blood pressure fluctuates throughout the day. PRODUCT NAME technology takes these changes into consideration every time the monitor inflates the cuff and makes each measurement personalized- regardless of arm size or blood pressure level. PRODUCT NAME technology is useful even for people with certain arrhythmia or heart disorders.

Automatic Inflation Blood Pressure Monitors

Accurate blood pressure and pulse rate are just a push-button away-- simply wrap the adjustable cuff around your arm and press START. In seconds your blood pressure and pulse are alternately displayed on the large digital panel.

Manual Inflation Blood Pressure Monitors

DHK's easy-to-use manual inflation monitors make it simple to measure your blood pressure and pulse at home. Just turn the power on and squeeze the inflation bulb to fill the cuff with air. The cuff deflates automatically and your measurements appear on the clear digital display.
